What's Causing the Consumer Blues?

Each month, researchers at the University of Michigan interview hundreds of consumers about their opinions on current economic conditions, as well as their personal finances, buying intentions, and expectations for the future. Survey results are captured in the Index of Consumer Sentiment, which is a closely watched economic indicator because household spending accounts for about two-thirds of U.S. gross domestic product.

Despite a strong labor market, the index fell to an all-time low in June 2022, before starting to improve in the third quarter. High inflation, the specter of rising interest rates, and stock market declines are some of the reasons consumers have felt pessimistic about their economic prospects.

A 529 Plan Can Help Jump-Start Your College Fund

Busy, cash-strapped parents might welcome all the help they can get when saving for college. Building a college fund, even a small one, can help families feel more in control and less stressed during the college research and admission process. Think of a college fund as a down payment. Then at college time, it can be supplemented by financial aid (grants, scholarships, loans, and work-study), current income, and student funds. A good benchmark is to try and save at least 50% of your child's projected college costs, but any amount is better than nothing.

A 529 savings plan can be instrumental in building a college fund. This individual investment account offers the opportunity for tax-free earnings if the funds are used for college, making every dollar count. (For withdrawals not used for qualified education expenses, earnings may be subject to taxation as ordinary income and a 10% penalty.) You can set up monthly electronic fund transfers from your bank account to put your savings on autopilot. But one-off contributions are allowed, too, and the holidays can be an excellent time for grandparents or other relatives to make a small contribution as a gift. The new year is also a good time to re-double your efforts on building a college fund. Here are some common questions on opening a 529 savings account.

Can I open a 529 savings account in any state's plan?

Yes. Currently, all states except Wyoming offer one or more 529 savings plans, and they are generally open to residents of any state. However, it's a good idea to look at your own state's 529 plan first, because some states may restrict any tax benefits (e.g., tax deduction for contributions, tax-free earnings) to residents who participate only in the in-state plan. Why open an account in another state's 529 plan? There could be a number of reasons, including a wider range of investment options, a solid investment track record, an excellent investment manager, or lower management fees. For a list of all 529 plans by state, visit the [Saving for College website](#).

What happens if I open a 529 plan in one state and then move to another state?

Essentially nothing. You can simply leave the account open and keep contributing to it. Alternatively, you can switch to a different 529 plan by rolling over the assets from the original plan to a new 529 plan. You can keep the same beneficiary (under IRS rules, you are allowed one 529 plan same-beneficiary rollover once every 12 months), but check the details of each plan for any potential restrictions. If you decide to stay with your original 529 plan, just remember that your new state might limit any potential 529 plan tax benefits to residents who participate in the in-state plan.

Should I open one 529 account for both of my kids or a separate account for each?

That depends on your personal preferences, but opening separate accounts often makes sense. Two accounts let you contribute different amounts for each child as needed, tailor your investment portfolios to each child's age, and avoid commingling funds. If you choose one account and invest too aggressively, you might incur losses when your older child is close to college. And if you invest too conservatively, your investment returns may not keep pace with college inflation for your younger child. You also run the risk of depleting most or all of the funds for your oldest child.

How a 529 Account Helps at College Time

Does it make sense to open a 529 account if my child is a few years from college?

It might. Even if your child is only a few years from college, you could theoretically save for another four or five years, right up through junior year of college. You could open a 529 account, contribute monthly, and any earnings would be tax-free if the money is used for college. Having a designated college account instead of a general savings account might also lessen the temptation to dip into it for non-college expenses.

As with other investments, there are generally fees and expenses associated with participation in a 529 plan. There is also the risk that the investments may lose money or not perform well enough to cover college costs as anticipated. The tax implications of a 529 plan should be discussed with your legal and/or tax professionals because they can vary significantly from state to state. Most states offering their own 529 plans may provide advantages and benefits exclusively for their residents and taxpayers, which may include financial aid, scholarship funds, and protection from creditors. Before investing in a 529 plan, consider the investment objectives, risks, charges, and expenses, which are available in the issuer's official statement and should be read carefully. The official disclosure statements and applicable prospectuses, which contain this and other information about the investment options, underlying investments, and investment company, can be obtained by contacting your financial professional.

When Should Young Adults Start Investing for Retirement?

As young adults embark on their first real job, get married, or start a family, retirement might be the last thing on their minds. Even so, they might want to make it a financial priority. In preparing for retirement, the best time to start investing is now — for two key reasons: compounding and tax management.

Power of Compound Returns

A quick Internet search reveals that Albert Einstein once called compounding "the most powerful force in the universe," "the eighth wonder of the world," or "the greatest invention in human history." Although the validity of these quotes is debatable, Einstein would not have been far off in his assessments.

Compounding happens when returns earned on investments are reinvested in the account and earn returns themselves. Over time, the process can gain significant momentum.

For example, say an investor put \$1,000 in an investment that earns 5%, or \$50, in year one, which gets reinvested, bringing the total to \$1,050. In year two, that money earns another 5%, or \$52.50, resulting in a total of \$1,102.50. Year three brings another 5%, or \$55.13, totaling \$1,157.63. Each year, the earnings grow a little bit more.

Over the long term, the results can snowball. Consider the examples in the accompanying chart.

A Head Start Can Be a Strong Ally

This chart illustrates how much an investor could accumulate by age 65 by investing \$3,000 a year starting at age 25, 35, and 45 and earning a 6% annual rate of return, compounded annually.

These hypothetical examples of mathematical compounding are used for illustrative purposes only and do not reflect the performance of any specific investments. Fees, expenses, and taxes are not considered and would reduce the performance shown if they were included. Rates of return will vary over time, particularly for long-term investments. Investments offering the potential for higher rates of return also involve a higher degree of investment risk. Actual results will vary.

Tax Management

Another reason to start investing for retirement now is to benefit from tax-advantaged workplace retirement plans and IRAs.

Lower taxes now. Contributions to traditional 401(k)s and similar plans are deducted from a paycheck before taxes, so contributing can result in a lower current tax bill. And depending on a taxpayer's income, filing status, and coverage by a workplace plan, contributions to a traditional IRA may result in an income tax deduction.

Tax-deferred compounding. IRAs and workplace plans like 401(k)s compound on a tax-deferred basis, which means investors don't have to pay taxes on contributions and earnings until they withdraw the money. This helps drive compounding potential through the years.

Future tax-free income. Roth contributions to both workplace accounts and IRAs offer no immediate tax benefit, but earnings grow on a tax-deferred basis, and qualified distributions are tax-free. A qualified distribution is one made after the Roth account has been held for five years and the account holder reaches age 59½, dies, or becomes disabled.

Saver's Credit. In 2022, single taxpayers with adjusted gross incomes of up to \$34,000 (\$66,000 if married filing jointly) may qualify for an income tax credit of up to \$1,000 (\$2,000 for married couples) for eligible retirement account contributions. Unlike a deduction — which helps reduce the amount of income subject to taxes — a credit is applied directly to the amount of taxes owed.

Avoiding penalties. Keep in mind that withdrawals from pre-tax retirement accounts prior to age 59½ and nonqualified withdrawals from Roth accounts are subject to a 10% penalty on top of regular income tax.

Additional Fuel for the Fire

Workplace plans that offer employer matching or profit-sharing contributions can further fuel the tax-advantaged compounding potential. Investors would be wise to consider taking full advantage of employer matching contributions, if offered.

Don't Delay

With the power of compounding and the many tax advantages, it may make sense to make retirement investing a high priority at any age.

Virtual Health Care Is Here to Stay

The use of telehealth skyrocketed early in the COVID-19 pandemic, with the number of remote office visits and outpatient services 78 times higher in April 2020 than in February 2020. Usage has stabilized since then, but as of early 2021 remained 38 times higher than the pre-pandemic level.¹

More recent data indicates that remote health care is here to stay. In August 2022, almost 23% of adults said they had an appointment with a health professional over video or phone during the previous four weeks.²

Remote Access

Telehealth encompasses a broad range of remote services including virtual office visits (also called telemedicine), remote patient monitoring, patient-physician communication through secure emails and websites, and online physician-to-physician consultation. Patients have immediate access to advice and treatment any time of the day or night, while avoiding unnecessary and costly emergency room visits. But telehealth is not only for emergency or off-hours situations; it also can be a more convenient and cost-effective way to get medical care that might normally be handled in a doctor's office.

Telehealth can be used to treat minor problems such as allergies and rashes, or for an urgent condition such as a high fever. It makes it easier to access therapy for mental health issues such as depression

and anxiety, and can fill gaps in the availability of specialty care. In other cases, doctors can remotely monitor the vital signs of patients with chronic conditions or follow up after a hospital discharge, and physical therapists can lead patients through exercises and monitor their progress.

In 2021, 94% of large employers offered traditional telemedicine services, 28% offered a virtual behavioral health-care network, 25% offered targeted virtual health solutions for specific conditions such as diabetes and musculoskeletal problems, and 16% offered a virtual primary-care service or network. About 12% of eligible employees used a telemedicine service in the first half of 2021.³

Original Medicare and Medicare Advantage plans also cover a wide variety of telehealth services. Some of these were specifically added to coverage because of the pandemic and are scheduled to expire at the end of 2023.⁴ Considering the convenience and cost savings associated with telehealth, it is possible they will be extended, but that remains to be seen.

If your health plan includes telehealth services, you might take a closer look at the details, download the app, and/or register for an online account. You'll be ready to log in quickly the next time you or someone in your family faces a medical problem.
