

Cybersecurity is Our Priority

Cyber threats are an unfortunate reality in today's world. At Oppenheimer & Co. Inc., safeguarding your information is something we take seriously, and we take great measures to ensure that we handle your sensitive data with care and diligence.

Here is how we help protect your information:

- **Encryption Technologies.** Any online transaction with Oppenheimer is protected by the best available technologies that are designed to prevent any unauthorized access or cyber attack.
- **24/7 Monitoring.** Our trained professionals monitor online activities day and night, and use advanced detection tools to help identify anomalies and stop threats.
- **Testing.** We regularly conduct system tests and software vulnerability scans so we're ready for any potential danger.
- **Training.** We regularly conduct awareness training with our employees and contractors to teach and update the skills needed to help protect sensitive information.

We're sending you this newsletter to stay in touch with some of our thoughts and ideas. Let us know if you have any questions about information in this newsletter or if you want to discuss anything about your account.

Cybersecurity Protection Tips

Simple things you can do to help safeguard your information:

1. **Use Strong Passwords.**
Create strong passwords or password phrases and safeguard them using password managers. There are many free and commercial password managers for every type of computer or device.
2. **Encrypt Your Data.**
The operating systems on your computers and devices offer built-in encryption for free. Look for the feature in your Settings options. You can set it, forget it, and you won't have to worry about your information – even on equipment you get rid of.
3. **Install Antivirus Software and Keep Software Up To Date.**
Keep your computer healthy and free of viruses and malware. There are some very good antivirus packages you can purchase, and the newer versions of Microsoft Windows come with free anti-virus software built-in.
